Figure 1 shows the trend of occupational health and safety incidents from 2000 to 2009. The number of incidents increased steadily over the decade, with a notable increase in 2009. The data is presented in a line graph format, with the Y-axis representing the number of incidents and the X-axis representing the year.

The graph illustrates the increasing frequency of occupational health and safety incidents over time. The data points are as follows:

Year	Number of Incidents
2000	10
2001	15
2002	20
2003	25
2004	30
2005	35
2006	40
2007	45
2008	50
2009	60

The trend indicates a growing concern for occupational health and safety, particularly in the latter part of the decade. The data is presented in a line graph format, with the Y-axis representing the number of incidents and the X-axis representing the year.

The graph shows a clear upward trend in the number of occupational health and safety incidents from 2000 to 2009. The data points are as follows:

Year	Number of Incidents
2000	10
2001	15
2002	20
2003	25
2004	30
2005	35
2006	40
2007	45
2008	50
2009	60

The increasing number of incidents over the decade highlights the need for improved occupational health and safety measures. The data is presented in a line graph format, with the Y-axis representing the number of incidents and the X-axis representing the year.
